

Softub® Products are registered with the California Energy Commission. Softub® Spas fall far below the maximum energy consumption allowance. Our Softub® uses only a fraction of the maximum allowable energy.

### Average Standby Power Range of Spa Models

\*Maximum standby power allowed \*\*Total annual power consumption in standby mode

$$\text{Annual Standby Energy Cost}^{\dagger} = \text{Total Annual Power Consumption in Standby Mode} \times \text{Energy Rate [cost per kilowatt hour in your area]}$$

<sup>†</sup>Data is based on standard test procedure for Portable Electric Spas as stipulated in ANSI/APSP/ICC-14 2014.

Note: This is the amount of power used at test conditions and does not include spa usage or extreme cold conditions. This data should be used only for comparison of spa models. Power is not monthly energy consumption.

Based on testing with the spa manufacturer's specified cover. This spa must be sold with this cover or a manufacturer's approved equivalent.

Tested Cover Manufacturer: Softub

Tested Cover Models: Softub 140, Softub 220, Softub 300

Power calculated based on standby testing @ 60° F. Actual values will vary based on use.
